

The Universal Design for Learning Center at OCALI increases access and equity through purposeful planning that leads to meaningful, effective instruction for all students.

We do this by providing coaching, leadership, and guidance on removing barriers through improving and optimizing learning based on scientific evidence about how people learn.

Linking Research to Real Life

UDL is a research-based set of principles to guide the design of learning environments that are accessible and effective for all. It is a flexible framework based on research about how humans learn. It is brain science.

The UDL Center is integrated with Ohio's Systems of Support through the Ohio Universal Design for Learning Collaborative, which is made up of representatives from Ohio's 16 State Support Teams.

A large, faint, stylized apple logo is positioned on the left side of the slide. It features a simple outline of an apple with a short stem and two leaves. The background of the slide is a solid red color with a grid of lighter red squares on the right side.
